Installer: West Coast Florida Enterprises, Fort Myers, Fla.

Architect: Burke, Hogue & Mills Associates Inc.

Bold colors, sweeping canopies and a playful ship-inspired design summon "All Aboard" to families and children of all ages. The Series 300 metal roofing system from IMETCO, with its unique "S" curved panels, creates a fun, rolling aesthetic across the various roofing sections that accent the entire building. Panels as long as 84-feet were field curved onsite, with a continuous and smooth concave-to-convex "S" curve, by IMETCO's own fabrication staff. The museum C'Mon will be a LEED certified green building, rated by the U. S. Green Building Council. IMETCO metal roof and wall products contributed to the building's LEED certification with recycled content and regional materials.
